

DEVELOPER · CDMX, STATE OF MEXICO · COMPLETAMENTE REMOTO

Software Engineer AI - Artificial Intelligence

Remote Software Engineer AI role, MXN 85K gross/month
+ full benefits. Seeking expert in Python, Java & GenAI
with proven production AI/ML delivery. Mon–Fri 9–6.

Position: Software Engineer AI

Location: Remote

Work Shift: Monday through Friday 09:00 am to 06:00 pm

Benefits:

- Christmas Bonus
- Vacation Bonus
- Flexible Compensation
- Food Vouchers
- Saving Fund
- Work Tools
- Employee Profit Sharing
- Performance Bonus
- Birthday Leave
- Major Medical Insurance
- Life Insurance
- Retirement Plan
- Company Cafeteria Service
- Reliable Transportation

Requirements:

- Bachelor's degree in Computer Science, Computer Engineering, Machine Learning, or related technical field
- 5+ years of professional software engineering experience with strong proficiency in Python and experience with Java
- 2+ years of hands-on production GenAI experience, including:
 - Building and deploying AI Agentic systems or autonomous agents in production environments
 - Architecting context engineering solutions including dynamic context assembly, memory systems, and agentic retrieval patterns
 - Designing multi-agent orchestration and multi-hop reasoning pipelines
 - Implementing agent planning strategies, tool orchestration, and human-in-the-loop patterns
 - Prompt engineering, function calling, and tool-use implementations
- Proven track record of shipping production-grade AI/ML systems that delivered measurable business value
- Strong experience with agentic frameworks, particularly ADK (Agentic Design Kit) and LangGraph, or similar modern agent orchestration tools

- Strong understanding of software design patterns, SOLID principles, and clean architecture applied to AI systems
- Experience with CI/CD pipelines, containerization (Docker), and cloud infrastructure

Key Responsibilities:

- **Design and Deploy Production AI Agentic Systems:** Architect, build, and deploy autonomous AI agents using state-of-the-art frameworks like ADK (Agentic Design Kit) and LangGraph that leverage LLMs to automate code reviews, quality analysis, and development workflow optimization at scale
- **Architect Advanced Context Engineering Solutions:** Design sophisticated context engineering strategies including dynamic context assembly, agentic retrieval patterns, memory systems (episodic and working memory), and multi-hop reasoning pipelines for complex code analysis tasks
- **Develop AI-Powered Automation Tools:** Build intelligent backend services in Python and Java that leverage GenAI to detect anti-patterns, suggest improvements, and standardize development workflows
- **Establish AI-Enhanced Engineering Excellence:** Define and implement coding standards and best practices specifically for GenAI systems, including LLM evaluation metrics, guardrails, and responsible AI principles
- **Lead AI-Powered Code Reviews:** Conduct comprehensive code reviews using state-of-the-art GenAI tools and agents,

providing architectural guidance on performance, security,
and AI system design
